MAKE MONEY WITH CHATGPT

P H B C Kumara

Introduction to
Make Money with ChatGPT

How to make money with ChatGPT is currently one of the most popular subjects on the internet. The 13 easy ways to use the AI technology to create money are covered in this eBook. We'll also give a few real-world examples of how to use the AI to your advantage.

ChatGPT was developed by Open AI, co-founded by Elon Musk and led by CEO Sam Altman, using GPT-3.5 (Generative Pre-Trained Transformer) technology. The AI chatbot can converse in genuine conversations and answer with text that is startlingly human-like.
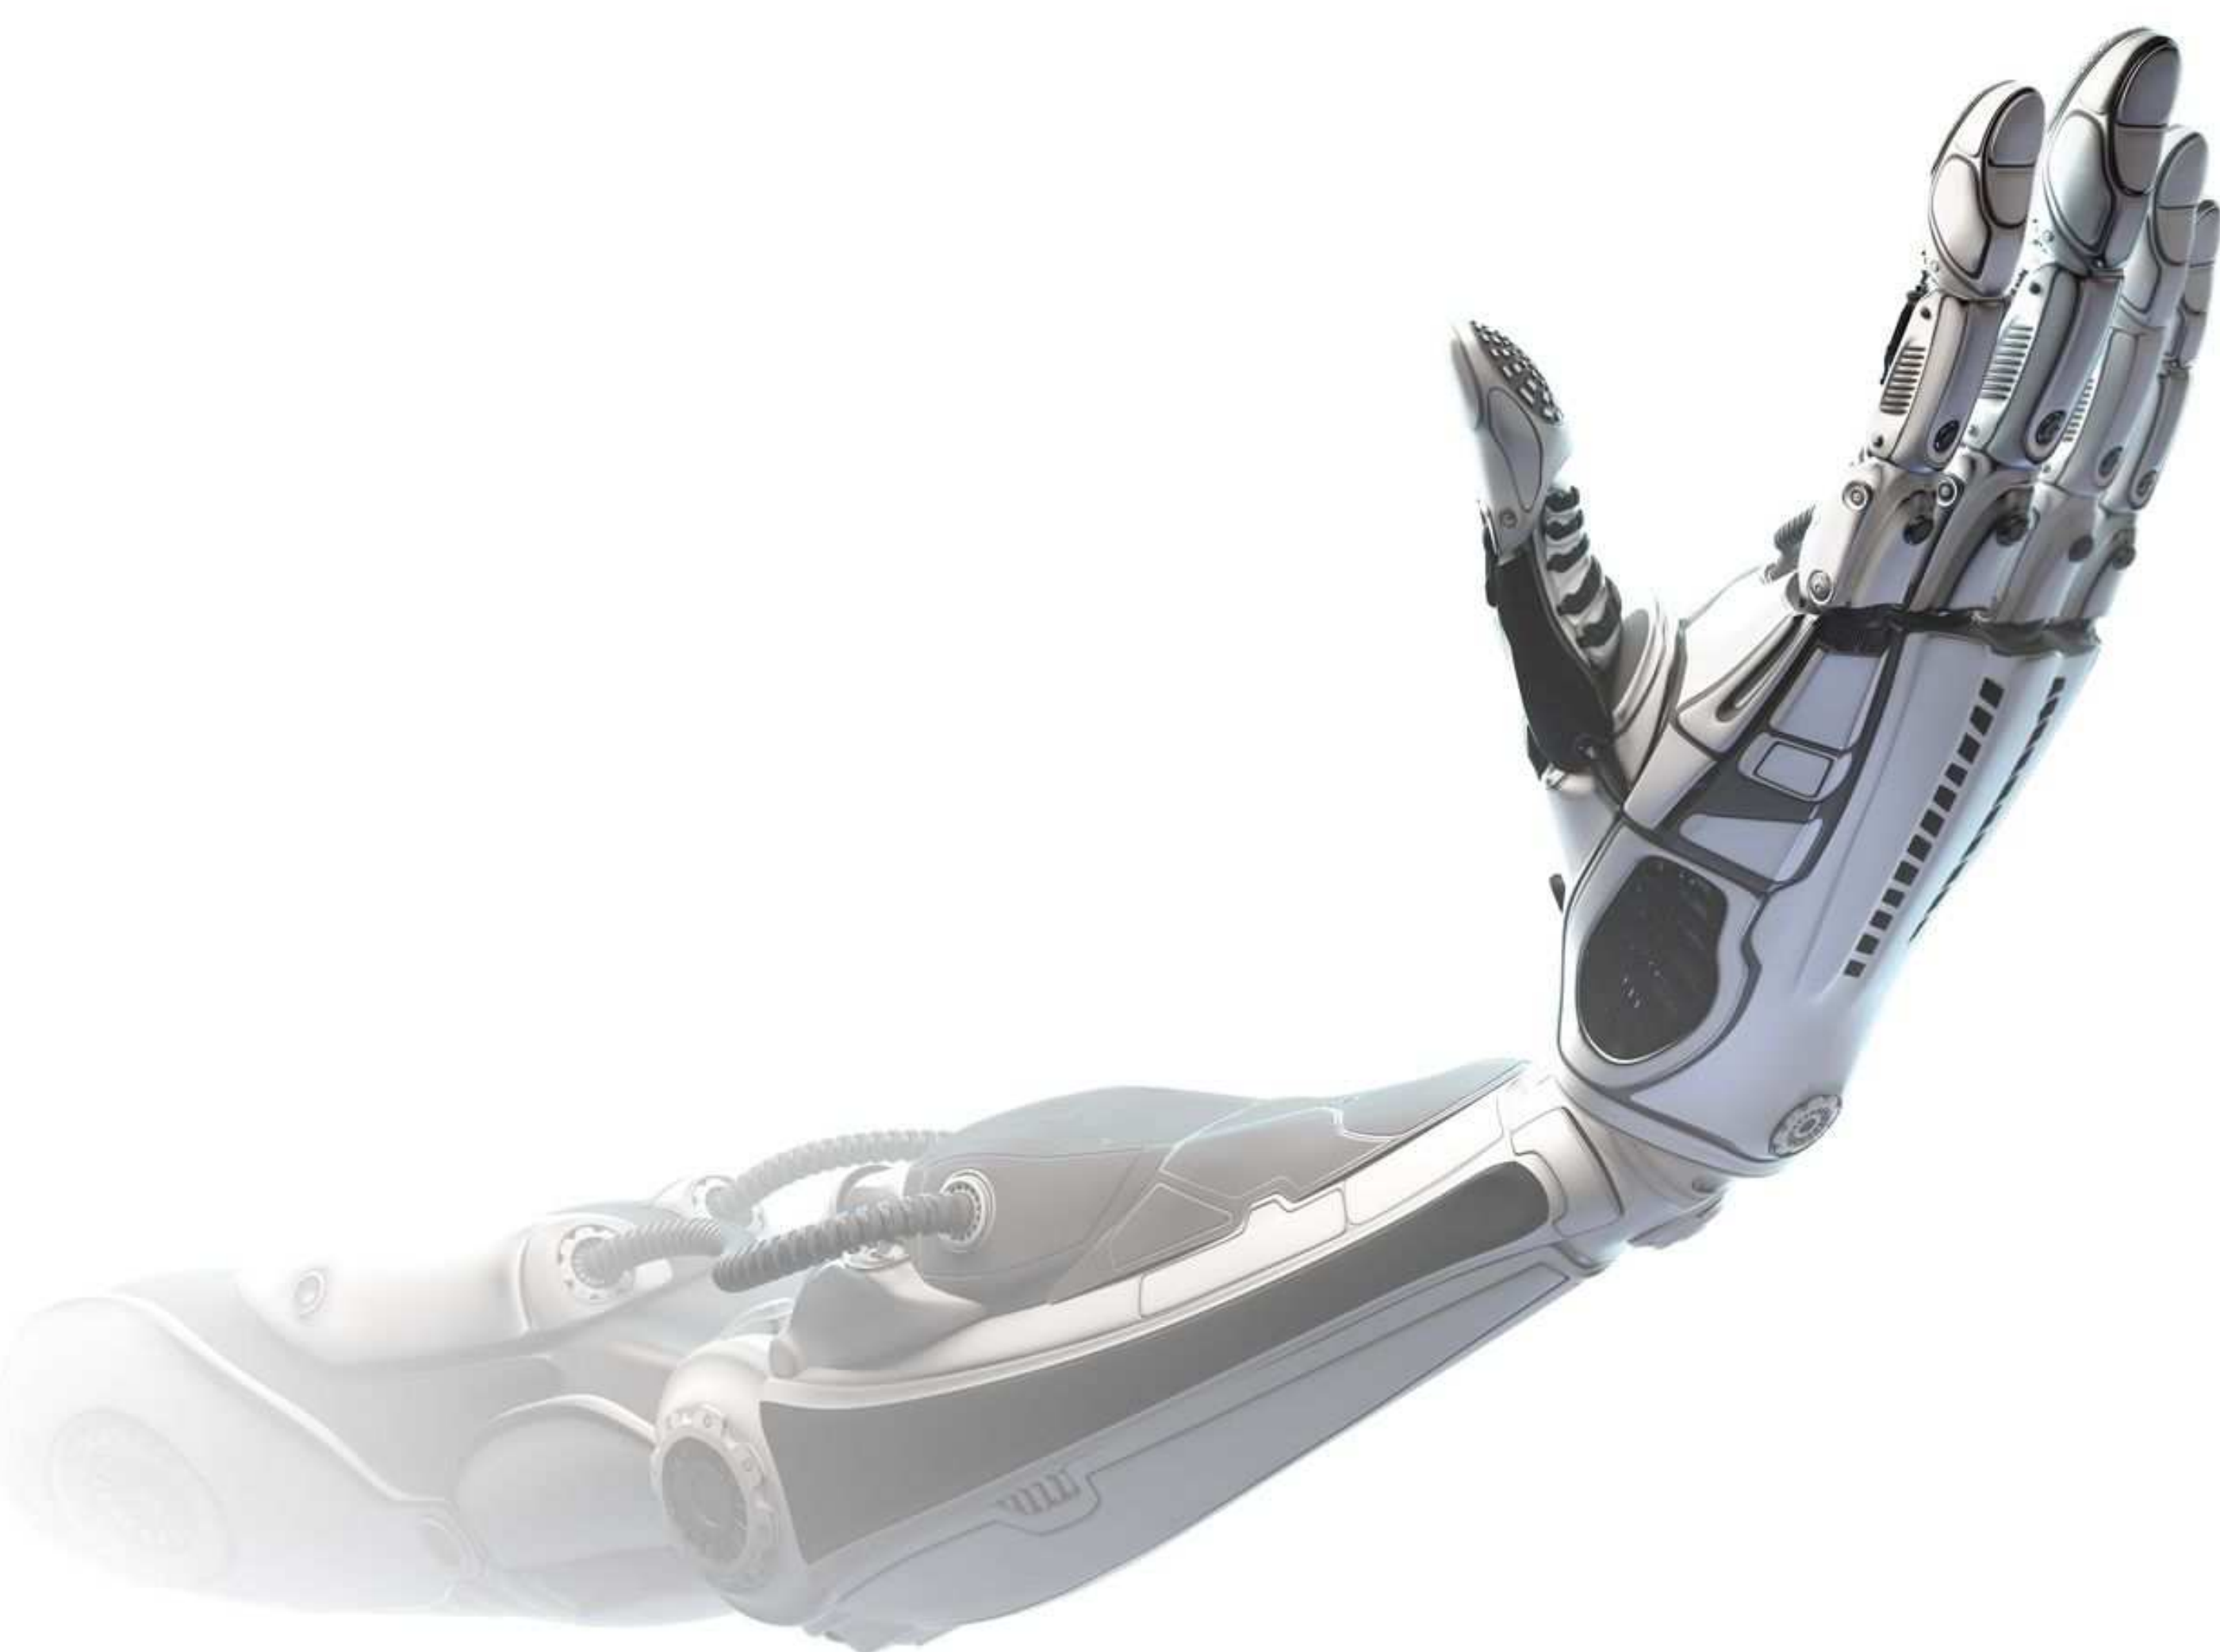

ChatGPT is exciting and opens up endless possibilities for how we interact with technology.

Make money with Chat GPT

OUR LIST OF HOW TO MAKE MONEY WITH CHATGPT

A large language model can predict the next word and generate written content.

Make Money With ChatGPT

With RLHF, ChatGPT learns how to follow directions and respond to people in the right way (Reinforcement Learning with Human Feedback). RLHF is an excellent supplemental training layer. An excellent illustration of how NLP (Advanced Natural Language Processing) is developing rapidly is ChatGPT. With the help of this new natural language model, users can communicate with a machine more naturally and intuitively.

When utilizing ChatGPT, keep in mind how crucial it is to write precise and comprehensive prompts. You don't really need to teach the AI bot. Instead, you must practice what to ask it to do, how to frame your requests, how much information to include, etc.

Expectations

You must read what ChatGPT writes and the instructions you've given it very carefully. Keep adding or altering until you get the proper answer. To examine your work, you can also utilize the excellent Originality.ai tool, which is now in beta. By checking the material for plagiarism and AI-generated content, it is helpful.

Despite being a very robust and sizable AI system, ChatGPT may produce some erroneous data. Modify whatever it creates, and verify the information.

1. CREATE VIDEOS USING CHATGPT

ChatGPT can be used in conjunction with other technologies to produce videos that can be sold for profit. To create amazing videos, intelligently combine these programs.

Below are a few illustrations of these technologies.

AI technology is used by Pictory, Murf.ai, Speechify, and other platforms to automatically convert lengthy text and video content into short films. For social media sharing, product recommendations, explainer videos, product demos, or other marketing videos, short videos are fantastic. Also, ChatGPT is the ideal instrument for writing the best scripts or instructional videos (but check out our thoughts about whether ChatGPT will fully replace human writers anytime soon).

After making your video, voice-over is required. Voice-over scripts can be written with ChatGPT. Moreover, text-to-speech technologies can convert them into any desired voice-overs.

How can I use ChatGPT to generate money online? You might use ChatGPT to generate scripts or directions for visual components of the videos as well as scripts for voice-overs that sound professional (for additional inspiration, check out our list of fascinating and creative uses of ChatGPT).

This is an example of a voice-over and video script that was generated in a matter of seconds. The best outcomes will be obtained by adding more thorough instructions. The keywords you'll need for SEO can also be included.

Generate a voice over script for a 3 minute video on crowdfunding. Include visual elements that will illustrate how crowdfunding works

Voiceover:
"Welcome to the world of crowdfunding. The concept is simple: people come together to fund a project or idea they believe in.

Visual: A group of people holding signs with the word "Funding" written on them.

Voiceover:
"Through online platforms, creators can share their projects with a global audience and ask for contributions.

Visual: A person sitting at a computer, creating a crowdfunding campaign page.

Voiceover:
"But crowdfunding is not just about raising money, it's about building a community.

Visual: A group of people gathered around a table discussing a project, with one person holding a laptop displaying a crowdfunding campaign page.

Voiceover:
"And with a wide range of options, from donation-based campaigns to those offering rewards, there's something for everyone to support.

Visual: A variety of campaign pages on a computer screen, each with different levels of rewards for contributors.

Voiceover:

2. UPDATE VIDEO DESCRIPTIONS

For video descriptions, YouTube allows us about 5000 characters, or roughly 500 words. Your search results will typically contain the first 150 characters. Since it affects audience behavior the most, YouTube defines this section for SEO purposes.

wires and circuits in the electronic human brain On the ChatGPT prompt, paste your current video description and tell it to rewrite it. Make sure ChatGPT is as concise as possible, writes no more than 150 characters, and provides the SEO-relevant information for the video.

By relevancy, YouTube's default sorting algorithm is used. So, the likelihood that the title will show up in a search will increase as you make it more pertinent to the search query.

ChatGPT can practically replace your virtual assistant once you become familiar to the instructions needed to edit YouTube video descriptions. As an expert in SEO optimization and description updating, you can sell your services.

Remember that YouTube has millions of videos; if you effectively market your services, you should be able to find plenty of clients.

3. OFFER COPYWRITING SERVICES

Writing copy every day for a long period of time can get boring. I discover that ChatGPT encourages creativity or blocks to writing. A content creator typically only needs a push or a fresh direction when creating convincing and effective text that will convert.

You can give ChatGPT writing instructions based on particular copywriting frameworks like PAS, AIDA, and BAB. Use questions like these as an illustration:

-For this written information, create a PAS (Problem, Agitate, Solution) cycle.
-BAB (Before, After, Bridge) an essay on this subject.
-For this essay, develop an AIDA (Attention, Interest, Desire, Action).

Hire the AI to rewrite until you obtain something that is reasonably usable. After that, you can provide expert copywriting services for websites, product descriptions, and advertisements.

You may create copies lot faster by utilizing ChatGPT as a tool.

Use the PAS copywriting framework - include Problem, Agitate, Solution. Write an introductory paragraph for an article about what social media managers do and why hireing one will help your marketing business.

Problem: As a business owner, you may be feeling overwhelmed by the constant need to update and maintain your company's social media presence. You understand the importance of having a strong online presence, but managing multiple platforms and creating engaging content can be time-consuming and difficult to stay on top of.

Agitate: Not only that, but without a dedicated social media manager, you risk missing out on potential customers and falling behind your competitors. Your social media accounts may not be reaching their full potential, and your content may not be resonating with your target audience.

Solution: Hiring a social media manager can help take the burden off of your shoulders and ensure that your social media presence is optimized for maximum reach and engagement. A skilled social media manager can create a strategic plan, manage multiple platforms, and produce high-quality content that will help your business stand out online.
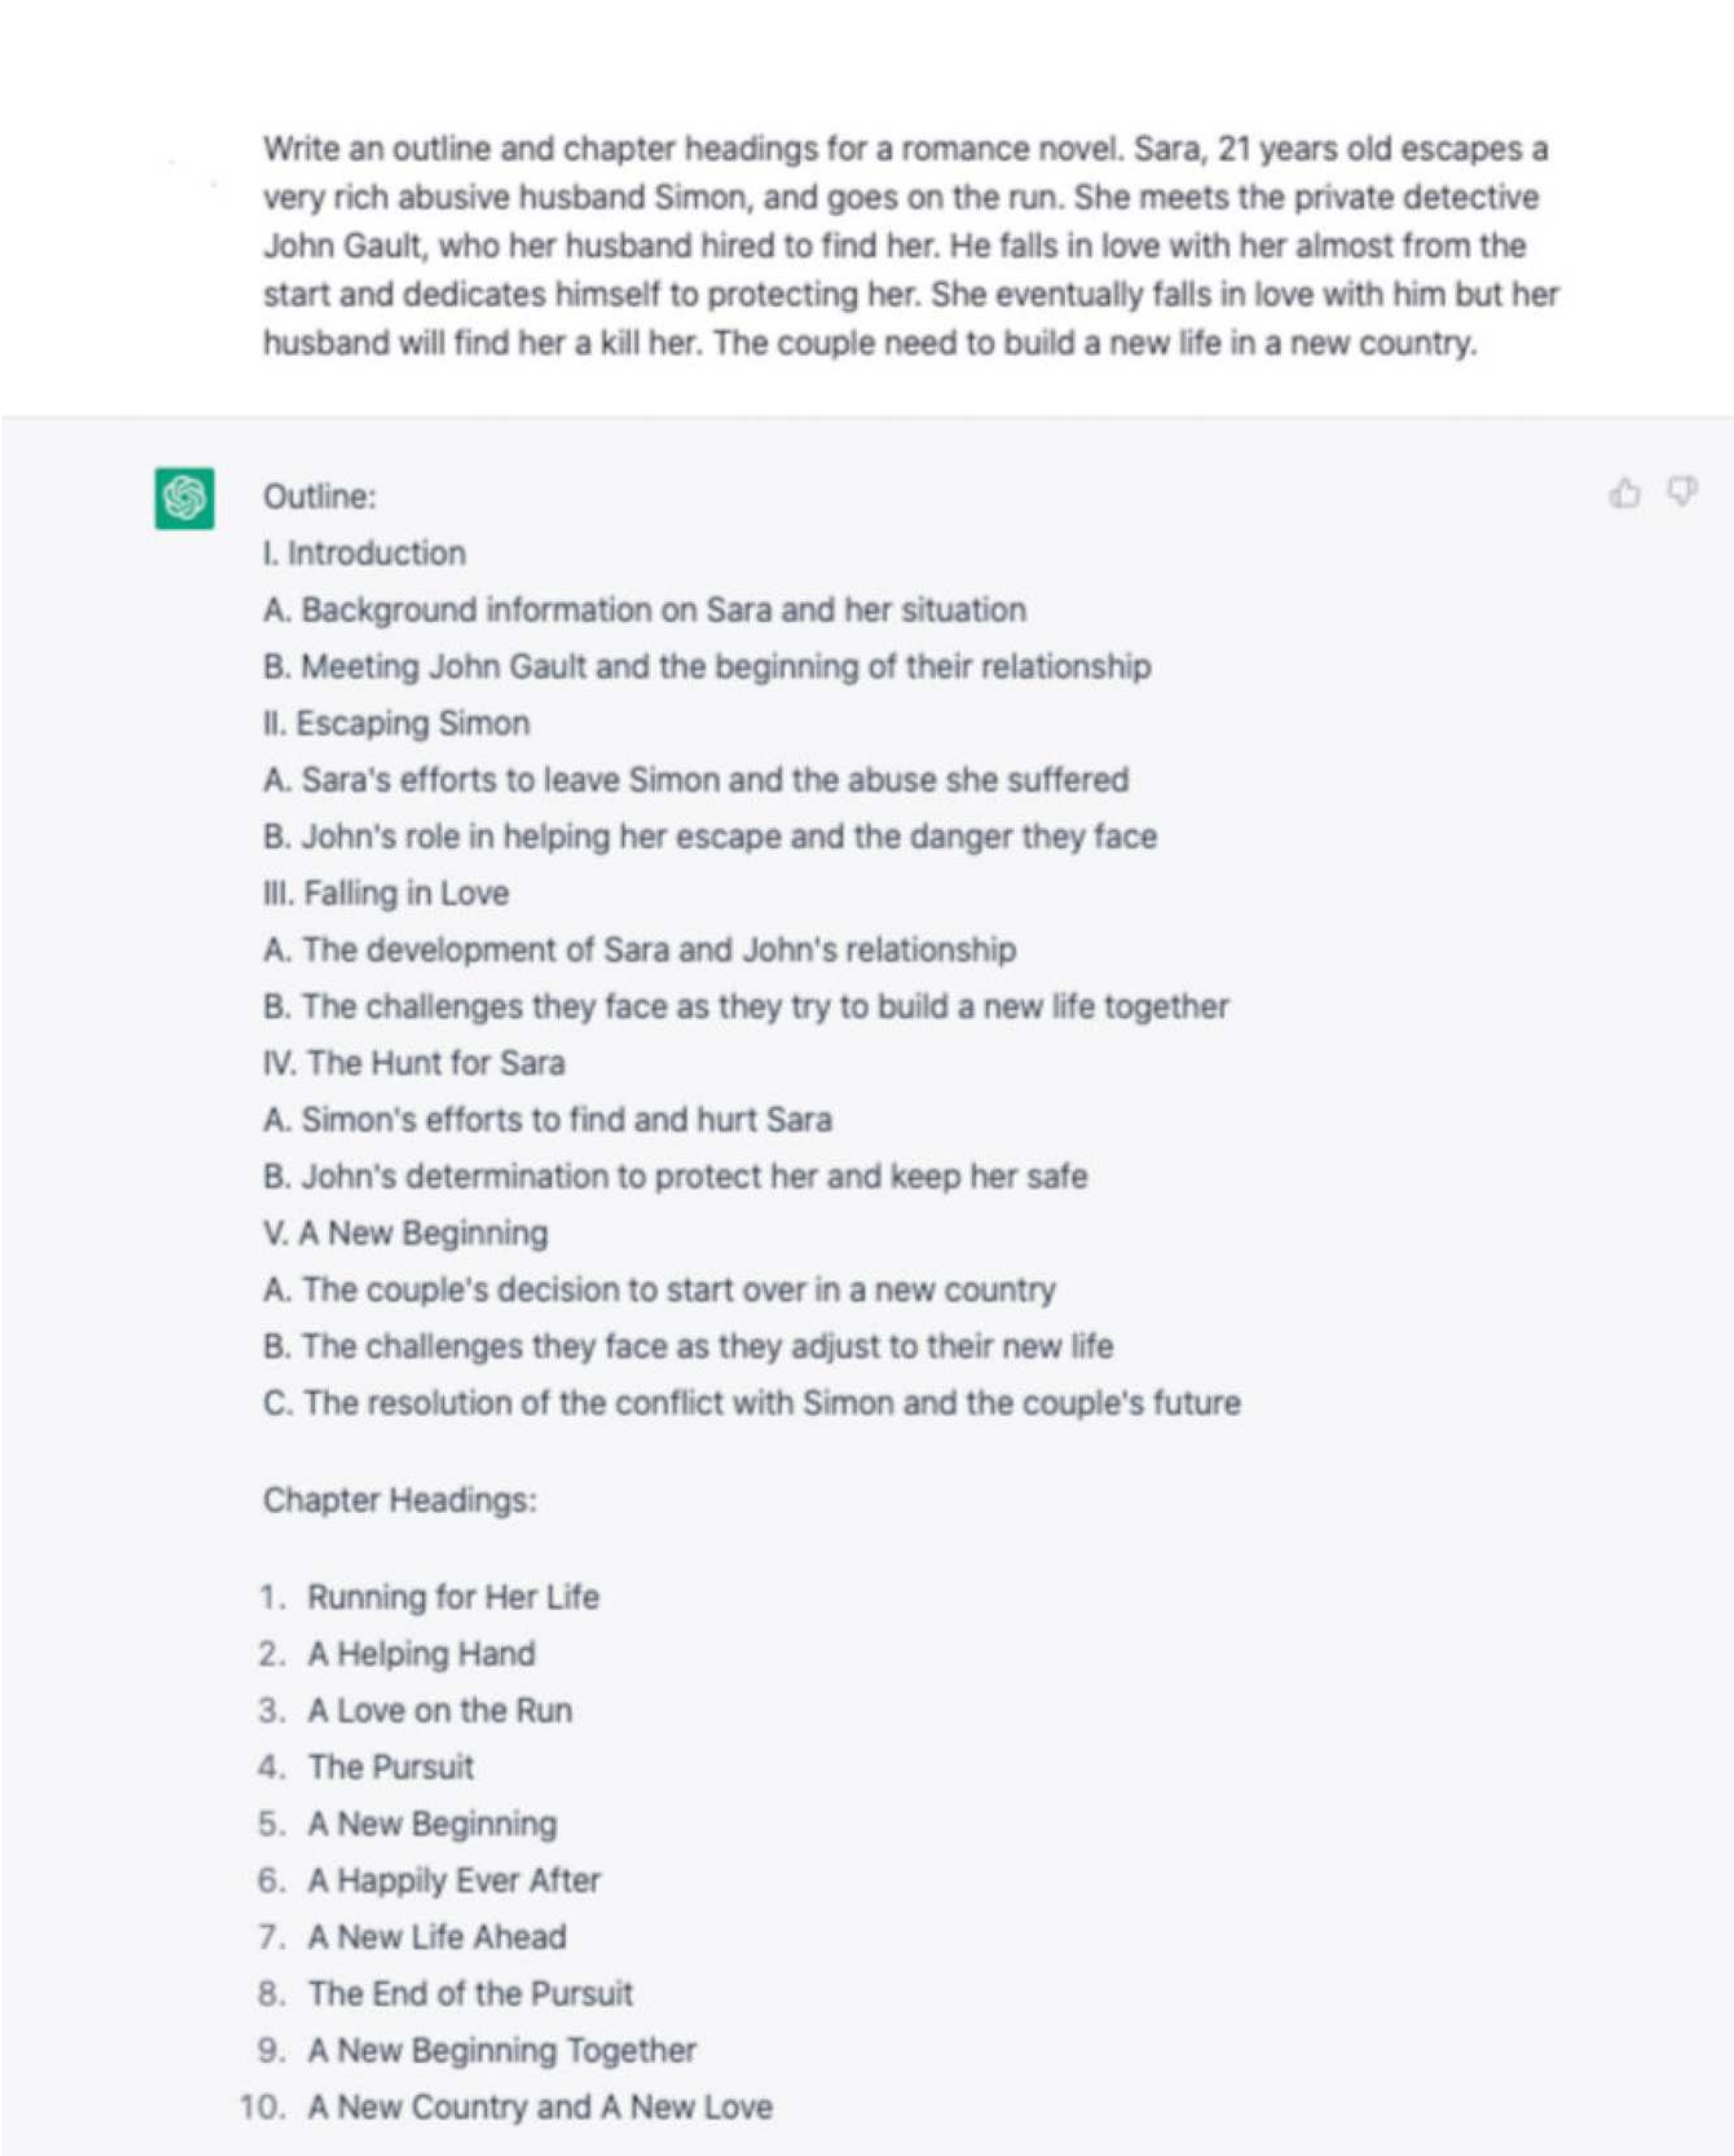

It takes a lot of time to try to convince ChatGPT to produce a full-length fiction book. To achieve your goals, you must cooperate with the AI and continually improve your prompts. Here is an illustration of a typical romance novel.

The formulaic nature of romance books contributes to their popularity. You can write and sell romance novels easily after you are familiar with the formulae and which character in the novel is the hero.

Schematic for a romantic book Continue using ChatGPT. ChatGPT might be the solution to generating income from producing E-books more quickly if you are persistent, willing to perform the tasks it can't, and patient.

Write an outline and chapter headings for a romance novel. Sara, 21 years old escapes a very rich abusive husband Simon, and goes on the run. She meets the private detective John Gault, who her husband hired to find her. He falls in love with her almost from the start and dedicates himself to protecting her. She eventually falls in love with him but her husband will find her a kill her. The couple need to build a new life in a new country.

Outline:
I. Introduction
A. Background information on Sara and her situation
B. Meeting John Gault and the beginning of their relationship
II. Escaping Simon
A. Sara's efforts to leave Simon and the abuse she suffered
B. John's role in helping her escape and the danger they face
III. Falling in Love
A. The development of Sara and John's relationship
B. The challenges they face as they try to build a new life together
IV. The Hunt for Sara
A. Simon's efforts to find and hurt Sara
B. John's determination to protect her and keep her safe
V. A New Beginning
A. The couple's decision to start over in a new country
B. The challenges they face as they adjust to their new life
C. The resolution of the conflict with Simon and the couple's future

Chapter Headings:

1. Running for Her Life
2. A Helping Hand
3. A Love on the Run
4. The Pursuit
5. A New Beginning
6. A Happily Ever After
7. A New Life Ahead
8. The End of the Pursuit
9. A New Beginning Together
10. A New Country and A New Love

5. OFFER TRANSLATION SERVICES

Although it can seem simple, there is considerably more to language translation than meets the eye. Text translation requires careful attention to cultural nuance, technical terms, audience, and other factors.

Translation of languages
As a machine learning model, ChatGPT may be trained to translate all the nuances of different languages. But it would be expensive and time-consuming.

Offering the most basic type of translation is the quickest route to financial success in the translation industry. Idioms or cultural variances don't need to be present in the text for standard translation. As a result, ChatGPT can be used to translate product descriptions, training manuals, and manuals for other software.

For instance, pick a paragraph that is simple to evaluate while evaluating ChatGPT's capabilities. The paragraph on standard translation is translated into Spanish in the example below.

You can use Google Translate to verify the translation's accuracy or ask ChatGPT to translate the generated Spanish back into English so you can compare the two.

Looking at the example below, you can see that there was only one word changed from the original, making the comparison flawless. This implies that you might complete conventional translations without having any prior language knowledge.

Translate the following into Spanish
Standard translation is just a simple professional translation accurately capturing the original text's meaning. Usually, idioms in the text or cultural differences between the texts are not considered.

This kind of translation service is ideal for manuals, training materials, and product descriptions.

La traducción estándar es solo una traducción profesional simple que captura con precisión el significado del texto original. Por lo general, los idiomas en el texto o las diferencias culturales entre los textos no se consideran. Este tipo de servicio de traducción es ideal para manuales, materiales de entrenamiento y descripciones de productos.

Translate the following into English
La traducción estándar es solo una traducción profesional simple que captura con precisión el significado del texto original. Por lo general, los idiomas en el texto o las diferencias culturales entre los textos no se consideran. Este tipo de servicio de traducción es ideal para manuales, materiales de entrenamiento y descripciones de productos.

Standard translation is only a simple professional translation that accurately captures the meaning of the original text. Generally, idioms in the text or cultural differences between the texts are not considered. This type of translation service is ideal for manuals, training materials, and product descriptions.
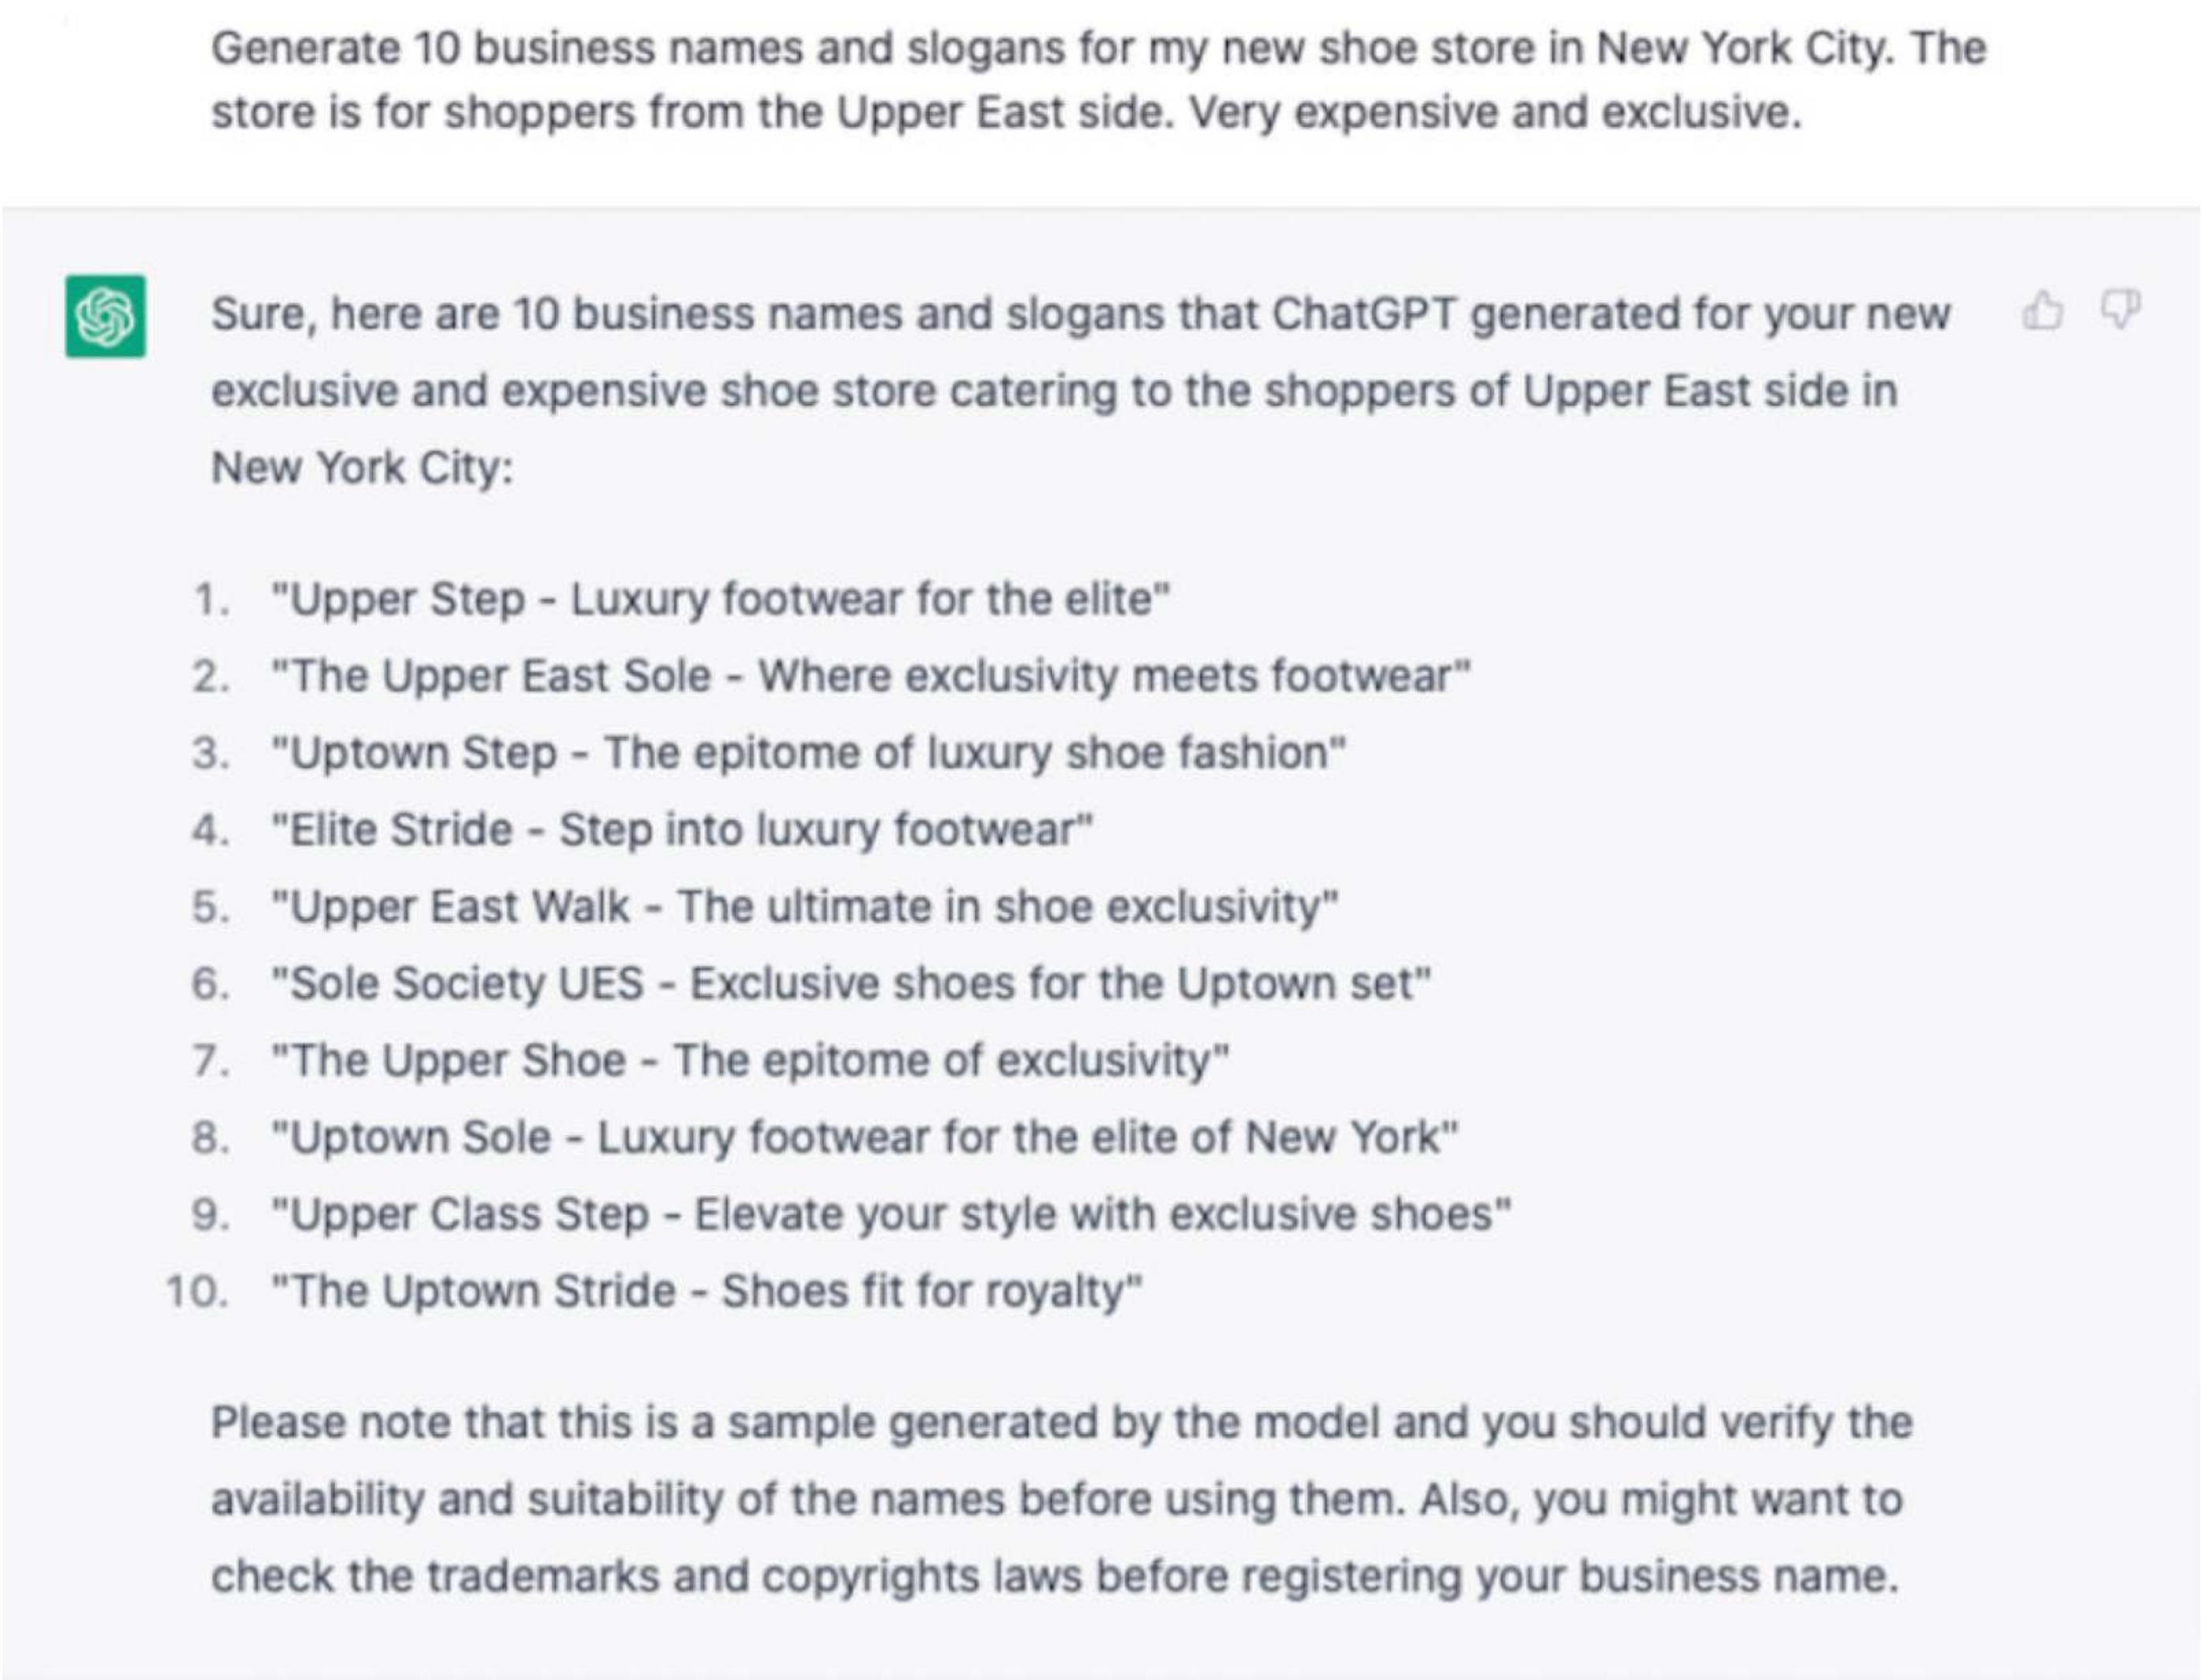

With ChatGPT, creating company names and slogans is comparatively simple. You can always adhere to a manual, such as how to name your business. But if you give the AI model information about what you need, who the brand and slogan are for, where you are, your financial situation, etc., it will come up with options based on its training data.

For instance, give it instructions to come up with ten company names and taglines for a brand-new shoe store in New York City.

Ten recommendations were produced in only a few short seconds. Check them out on Google first to check if anything comparable exists. Then look for variations on social media platforms to determine whether it has already been taken. Also, you can search by state or conduct a free nationwide trademark search online.

The best location to sell company names and slogans is on Fiverr; using ChatGPT to find something original and novel could help you earn some money.

Generate 10 business names and slogans for my new shoe store in New York City. The store is for shoppers from the Upper East side. Very expensive and exclusive.

Sure, here are 10 business names and slogans that ChatGPT generated for your new exclusive and expensive shoe store catering to the shoppers of Upper East side in New York City:

1. "Upper Step – Luxury footwear for the elite"
2. "The Upper East Sole – Where exclusivity meets footwear"
3. "Uptown Step – The epitome of luxury shoe fashion"
4. "Elite Stride – Step into luxury footwear"
5. "Upper East Walk – The ultimate in shoe exclusivity"
6. "Sole Society UES – Exclusive shoes for the Uptown set"
7. "The Upper Shoe – The epitome of exclusivity"
8. "Uptown Sole – Luxury footwear for the elite of New York"
9. "Upper Class Step – Elevate your style with exclusive shoes"
10. "The Uptown Stride – Shoes fit for royalty"

Please note that this is a sample generated by the model and you should verify the availability and suitability of the names before using them. Also, you might want to check the trademarks and copyrights laws before registering your business name.

ChatGPT can produce text that is more than just human-like. You can make web tools for your website with it. For instance, ChatGPT can design a calculator for your sales team to utilize in commission calculations. Also, you may quickly alter your commission rates on your own without having to pay someone else to do it.

I have an online store with several people selling different type of merchandize. They are paid a flat 10% commission rate on every sale below $2000. The commission rate goes down at 2% per 500 over $2000. I want to attract more sales people to sell for me. Please create an online calculator with with HTML, JavaScript and CSS for potential team member to calculate what they could eran. And for my sales team to be able calculate their commission rates.

Here's an example of an HTML form for an online commission calculator that potential team members can use to calculate their potential earnings:

```
<form>
  <label for="sale-amount">Enter Estimated Monthly Sales:</label>
  <input type="text" id="sale-amount" name="sale-amount">
  <br>
  <label for="commission-rate">Estimated Commission Rate:</label>
  <input type="text" id="commission-rate" name="commission-rate"
readonly>
  <br>
  <label for="commission-amount">Estimated Monthly Earnings:</label>
  <input type="text" id="commission-amount" name="commission-amount"
readonly>
  <br>
  <button type="button"
onclick="calculateCommission()">Calculate</button>
</form>
```

And here's an example of JavaScript that can be used to calculate the estimated commission rate and earnings:

```
function calculateCommission() {
  var saleAmount = document.getElementById("sale-amount").value;
  var commissionRate, commissionAmount;

  if (saleAmount <= 2000) {
    commissionRate = 10;
    commissionAmount = saleAmount * (commissionRate / 100);
  } else {
    commissionRate = 10 - ((saleAmount - 2000) / 500) * 2;
    commissionAmount = saleAmount * (commissionRate / 100);
  }
```

8. BLOGGING with ChatGPT

We all know that in order for ChatGPT to produce high-quality content that is more likely to be highly original or embrace a particular point of view, it needs clear, comprehensive instructions. You must include the perspective you intend to adopt toward the content as well as any pertinent background data.

But you have to add your own distinctive voice and perspective to make the blog your own. By examining the percentage of AI text and plagiarism, you can make good use of Originality.ai here.
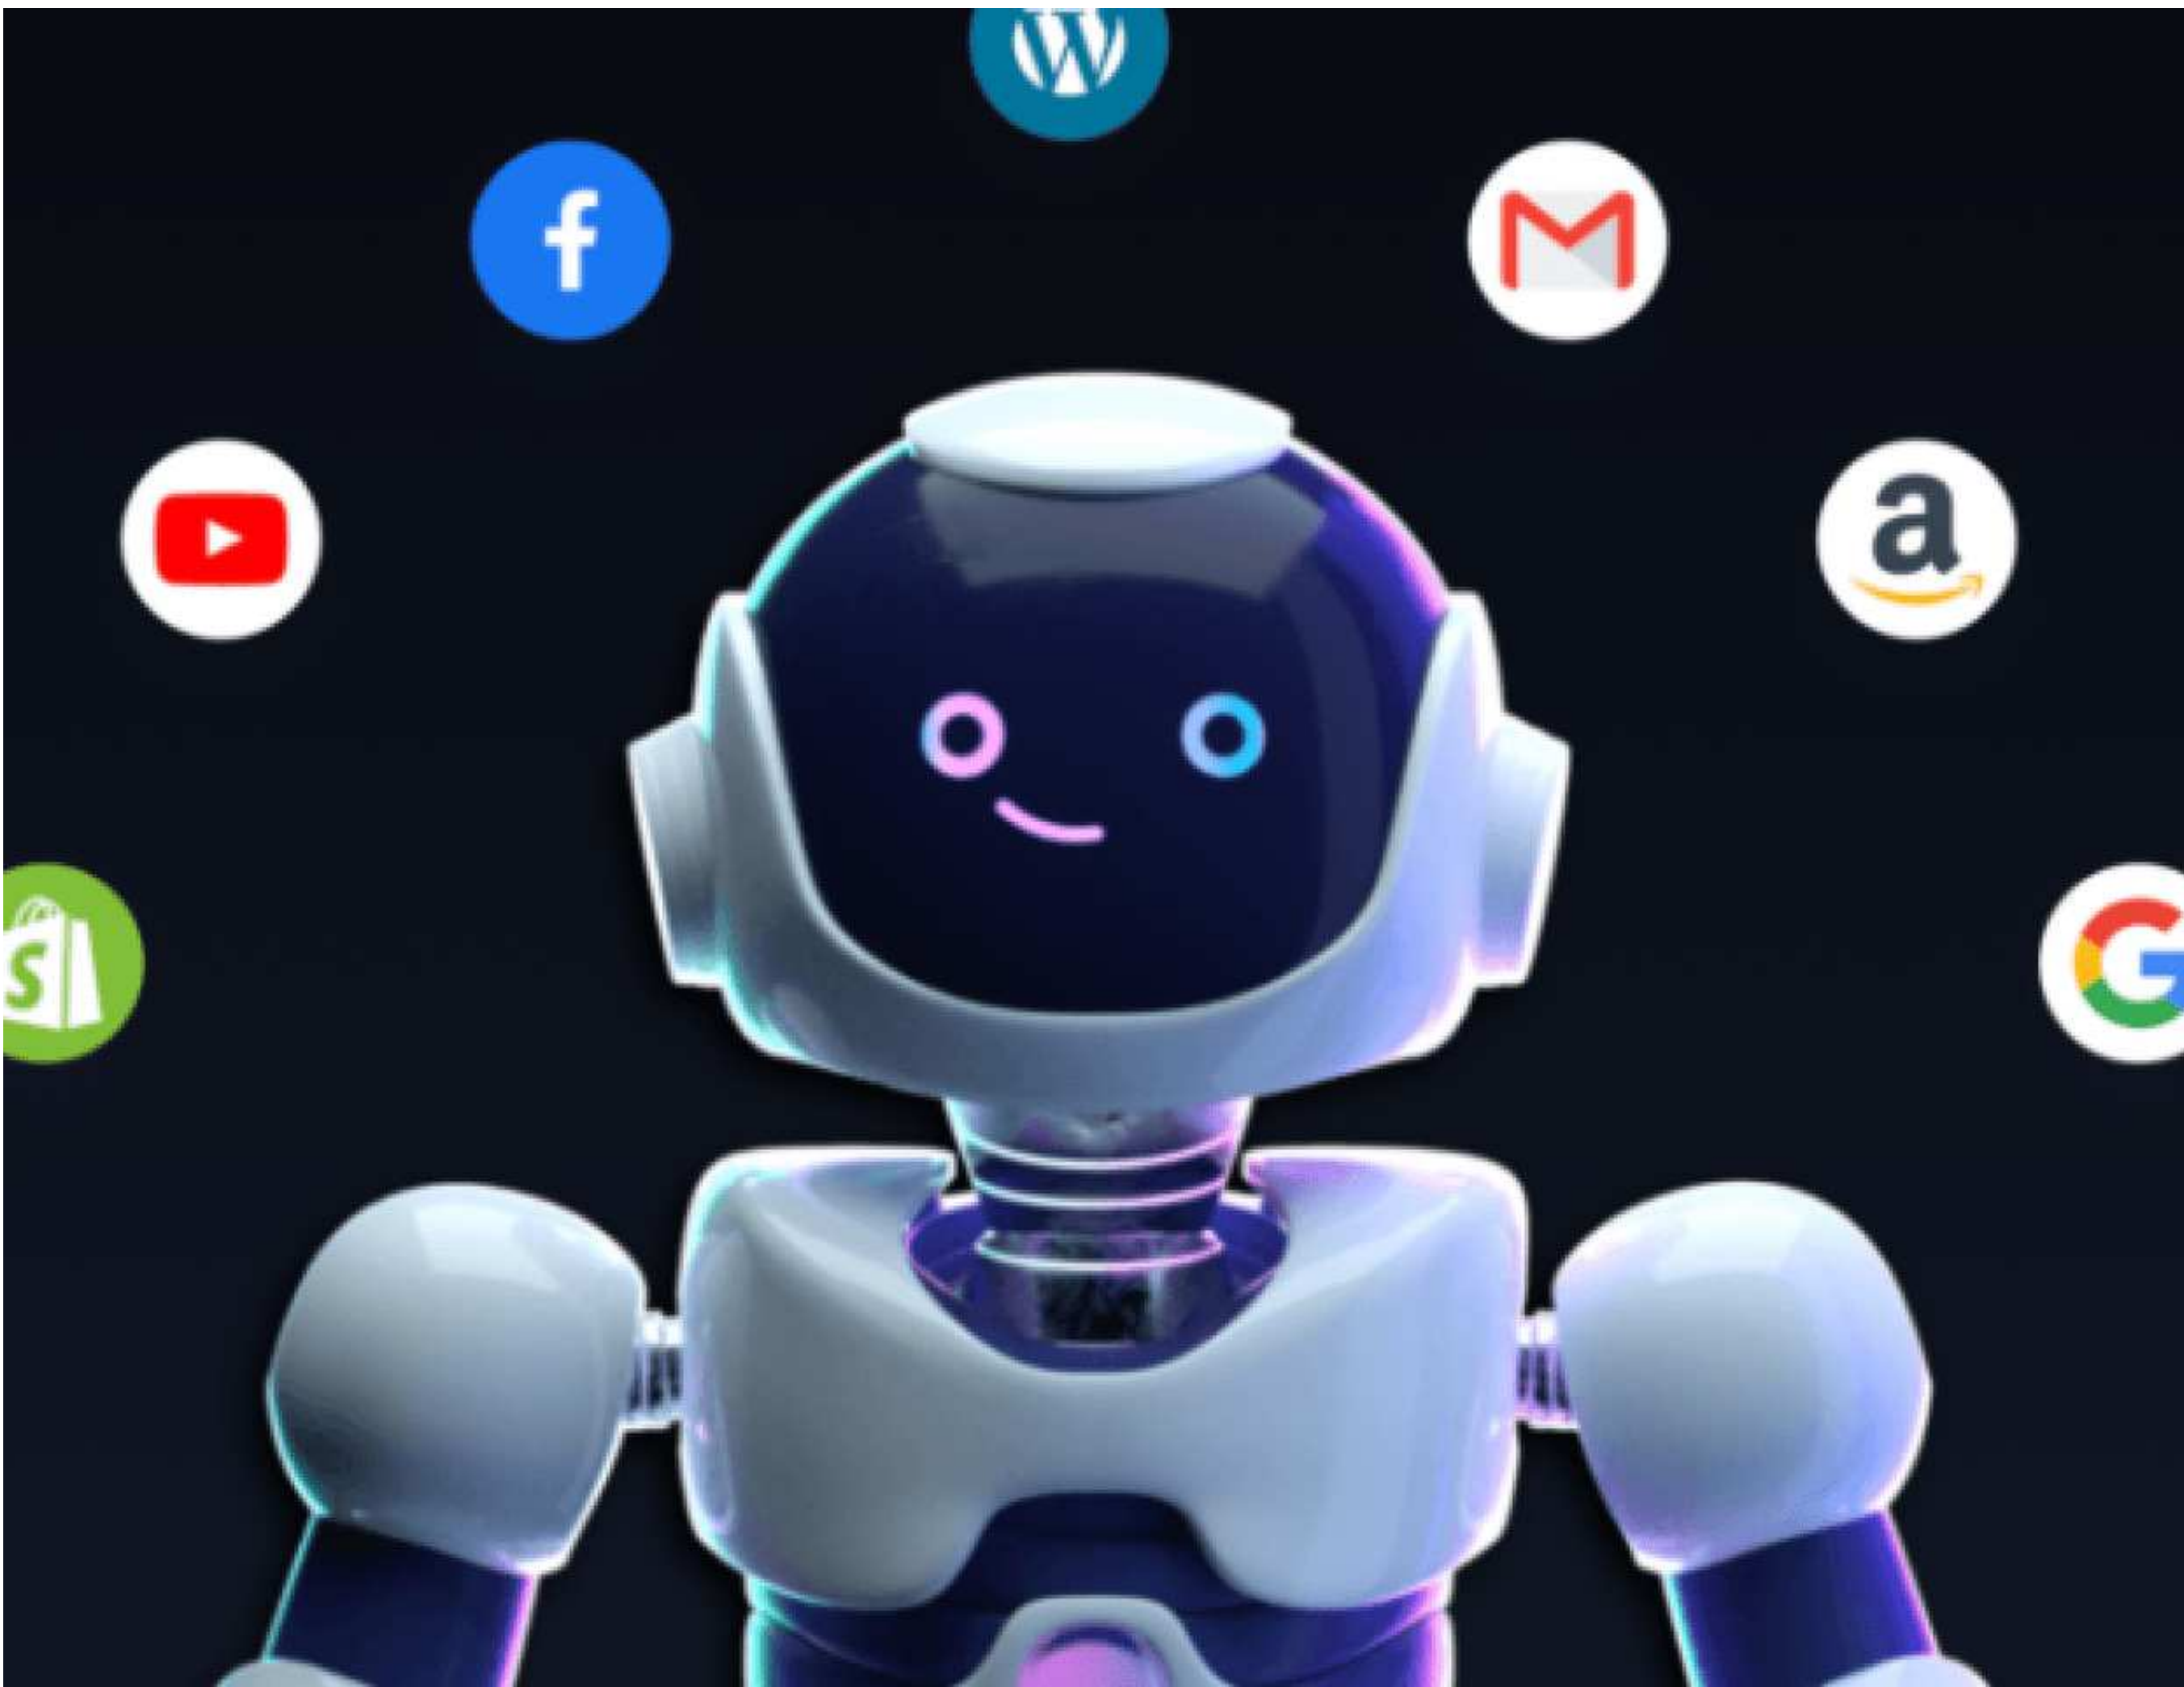

ChatGPT can help with ideas for titles, generate content ideas, help with keyword research, and generate FAQs. It can also write articles and even write Schema for your FAQ section.

9. REWRITE BLOG POSTS AND BLOG POST TITLES

This one is a little simpler because you're only asking the AI to edit material in current blog posts in order to boost traffic. You'll need to do some SEO research and select the right keywords. Copy & paste, then let ChatGPT handle the work.

Although you won't obtain a perfect result, as usual, it can save you a ton of time, especially if you need to alter or rewrite several blog entries. Offering your services to update blog entries is important and must be done frequently, so it might be quite profitable.
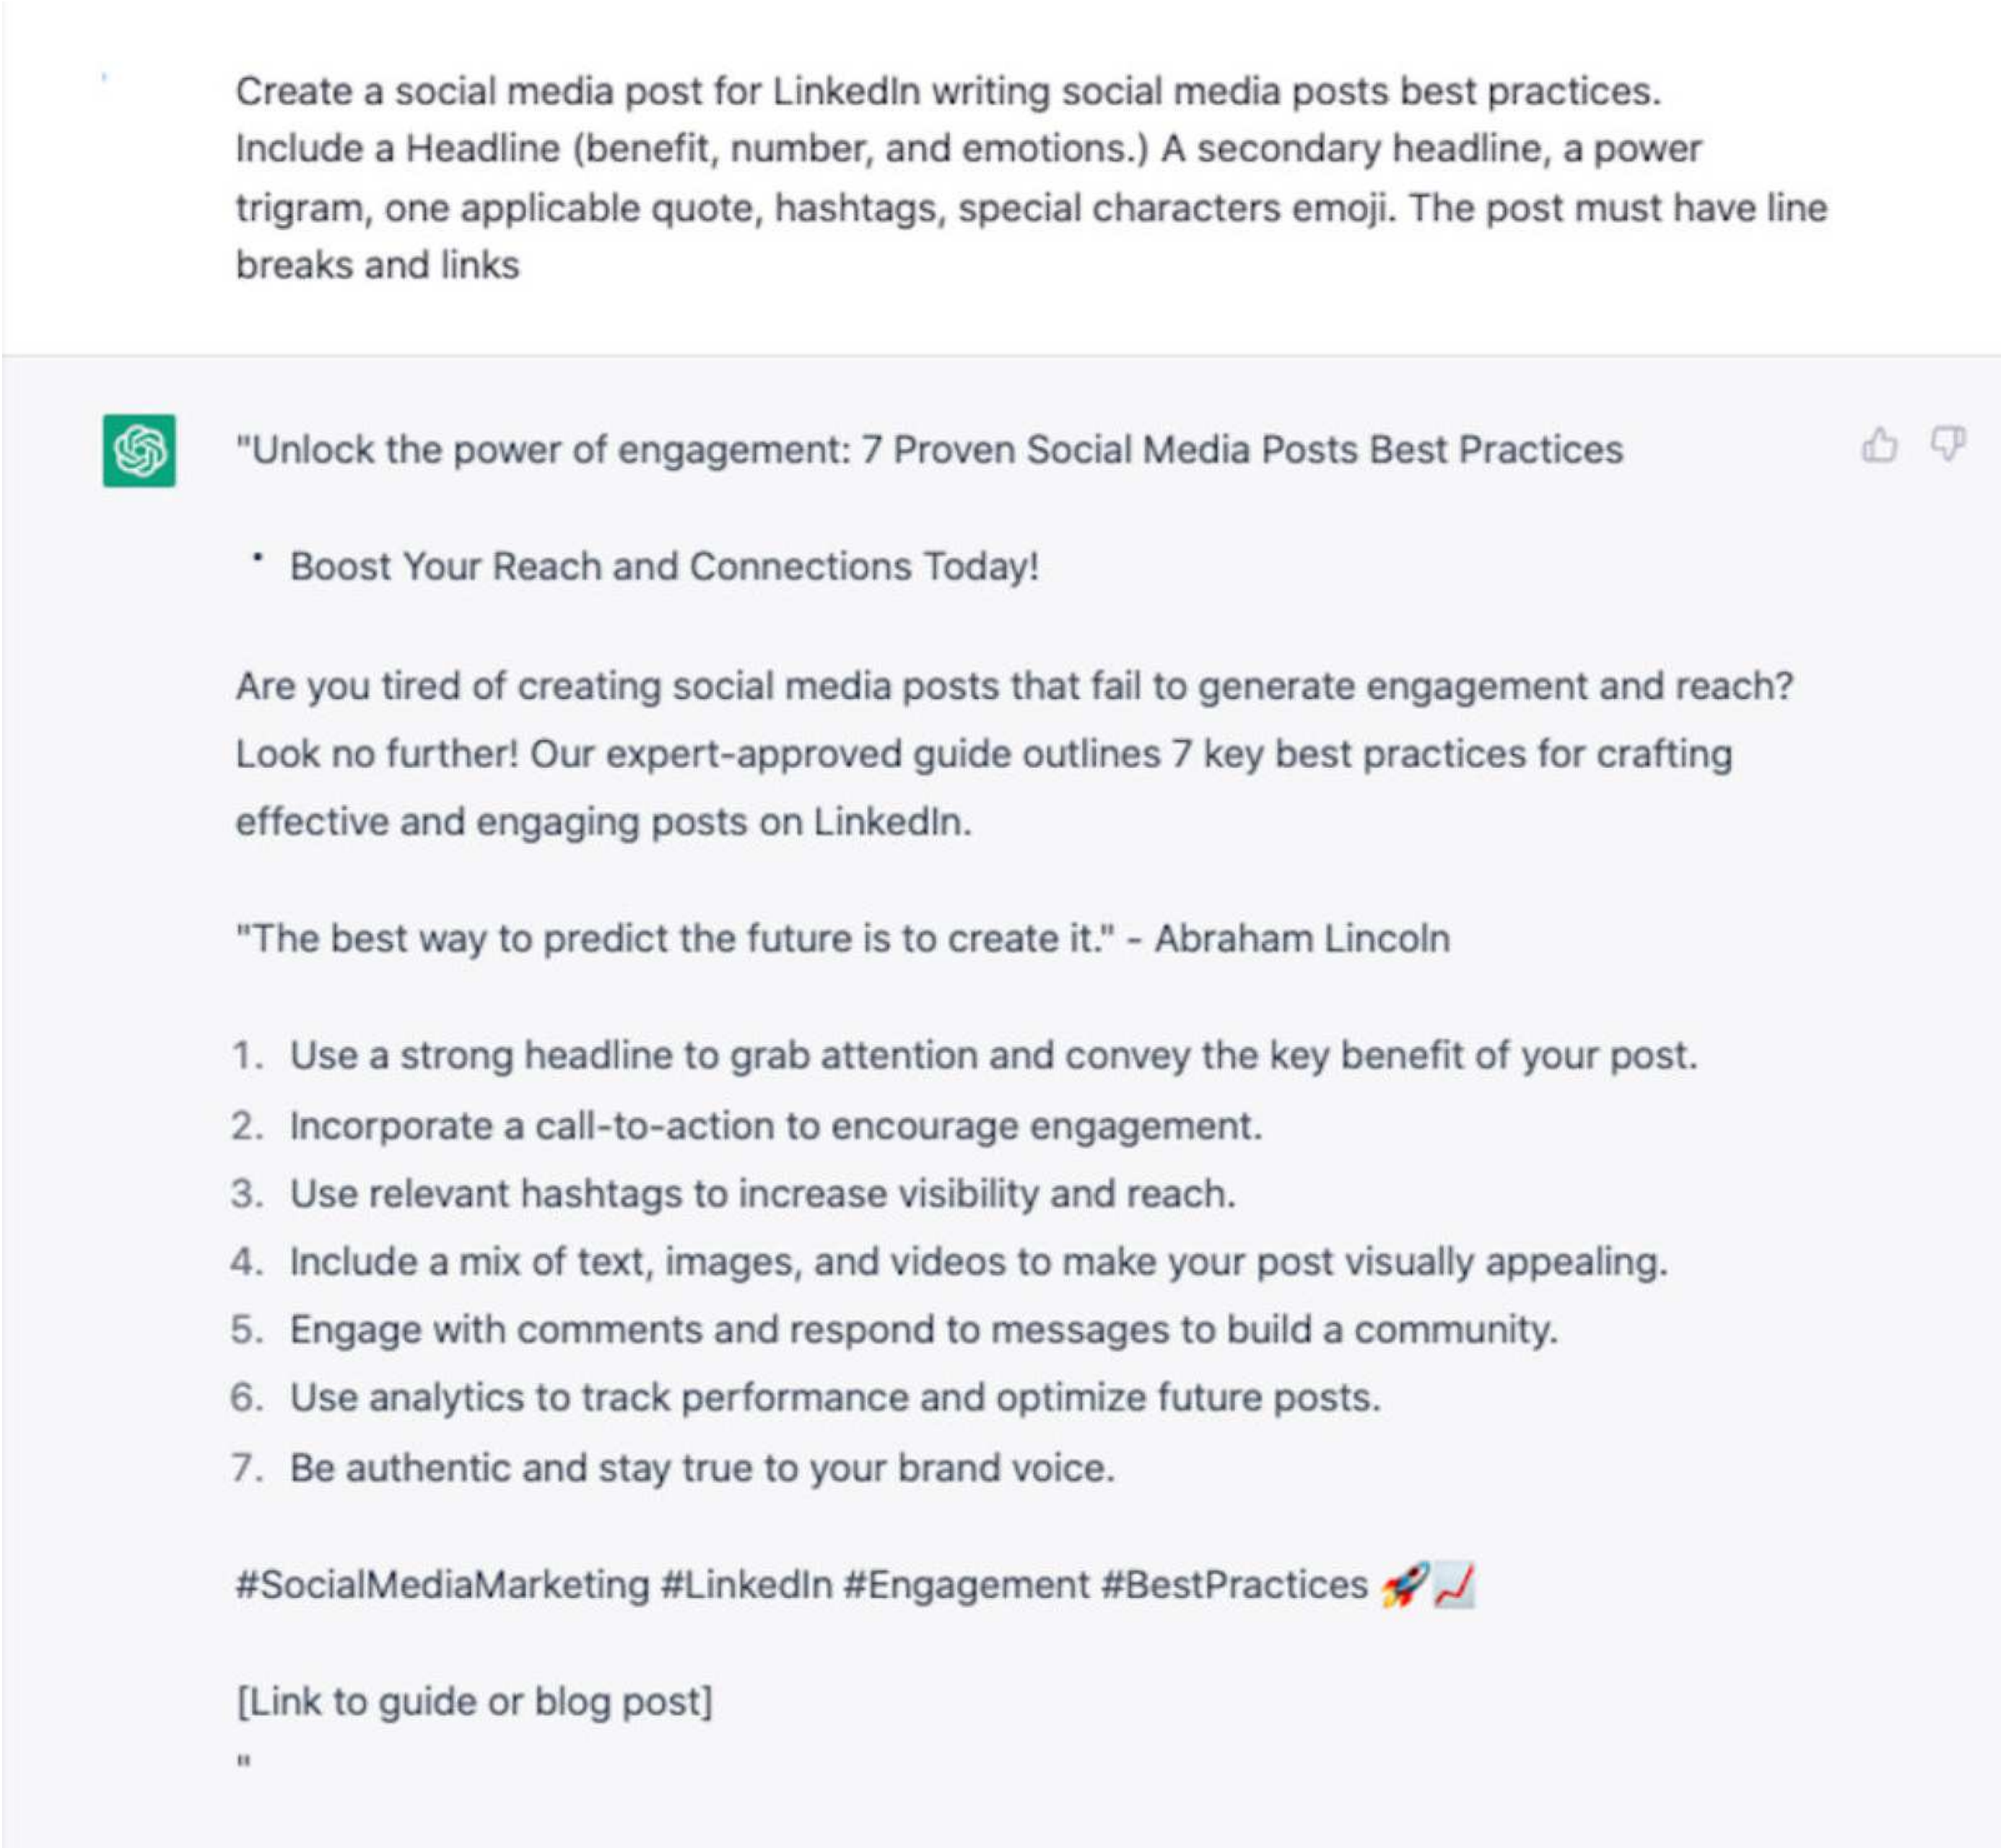

10. WRITE SOCIAL MEDIA CONTENT

ChatGPT is most stunning when used in social media posts. Social media content writing includes short tweets, Instagram captions, in-depth essays and posts on LinkedIn, answers, retweets, comments, scripts from TikTok, Facebook Messenger, and YouTube Shorts, among other things. Better results are produced with shorter posts, and it happens so quickly!

The recent LinkedIn post sample below demonstrates how much specificity was required in the inquiry. Also, you'll need to continually updating and adding.

GhatGPT Make an example social media post for LinkedIn. The production appears to be fairly decent at first sight. Nonetheless, ChatGPT frequently uses the same introductory phrases, such as "Are you weary of.." What ChatGPT provided was a good starting point but needed modification and personalization.

> Create a social media post for LinkedIn writing social media posts best practices.
> Include a Headline (benefit, number, and emotions.) A secondary headline, a power
> trigram, one applicable quote, hashtags, special characters emoji. The post must have line

11. CREATE A COURSE AND SELL IT

Use ChatGPT and video production tools like Synthesia to create a course that you can then market on websites like Udemy, Skillshare, Thinkific, etc.

Using ChatGPT to organize your courses is an excellent idea. It will produce course descriptions and promotional text for you to use in promoting your course. To make the course more engaging, develop multimedia content using Synthesia.

The ChatGPT course outline for a 4-week, 2-hour per day course in prompt engineering is shown below.

Write an outline for a four week, 2 hours per day online course on Prompt Engineering.

Week 1: Introduction to Prompt Engineering

- Defining Prompt Engineering and its importance
- Understanding the user and their needs
- The process of designing and testing prompts

Week 2: Crafting effective prompts

- Best practices for writing prompts
- Techniques for making prompts clear and actionable
- How to test prompts for usability and effectiveness

Week 3: Advanced Prompt Engineering

- Advanced techniques for designing prompts
- Personalization and customization
- Multi-modal prompts and conversational interfaces

Week 4: Real-world applications of Prompt Engineering

- Case studies of successful prompt engineering
- How to implement prompt engineering in your own projects
- Future trends in prompt engineering and where the field is heading.

Each day, the course will consist of a 2-hour live session where the instructor will present and discuss the materials, followed by an hour of practical exercises and Q&A.

Give me an example of one of the lessons in week two: Best practices for writing prompts

Lesson: Best Practices for Writing Prompts

Objectives:

- Understand the importance of clear and concise language in prompts
- Learn techniques for making prompts actionable
- Practice writing effective prompts

Materials:

- Slides on best practices for writing prompts
- Examples of good and bad prompts
- Writing exercises to practice crafting effective prompts

Outline:

I. Introduction

- Define the importance of clear and concise language in prompts
- Discuss why prompts need to be actionable

II. Techniques for Clear and Concise Language

- Use simple language
- Avoid jargon and

12. WRITE RESUMES AND BIOS

Finding a job can be a lot of work. Even just doing the necessary research before applying can seem like a full-time job. You might have to:

-Optimize and keep your social media profiles, including LinkedIn, current.
-Refresh your resume.
-Adjust your resume and concise biography for each position you apply for.

Write your bio, cover letter, and resumes using ChatGPT to position yourself as an expert and promote your services.

WHAT DOES YOUR RESUME SAY ABOUT YOU?

Remember that ChatGPT only collects data through 2021. As a result, it is out of date and the data might not be totally accurate.

Travel planning: iconic photos of popular tourist destinations throughout the world Because of its broad understanding of the world's countries, cultures, and general geography, ChatGPT is the best tool for arranging itineraries. With a simple amount of engagement, ChatGPT can construct and improve an itinerary based on your input in the chat.

You can start with the output and then add the most recent logistical and price information. The outcomes are excellent and nearly ready for usage. This is an excellent method for using ChatGPT to get income from organizing trip plans.

Write a simple 3 day travel itinerary for a trip to New York City departing from Heathrow Airport in the United Kingdom. I want to stay in a medium priced hotel in an upmarket location. I have about 3 hours free every day. I'm interested in cutting edge technology.

Day 1:

- Arrive at Heathrow Airport and take a taxi or shuttle to hotel.
- Check in to hotel in an upmarket location.
- Visit the American Museum of Natural History to see the Rose Center for Earth and Space.
- Walk through Central Park and enjoy the sights and sounds.
- Have dinner in the trendy Meatpacking District.

Day 2:

- Take a ferry to the Statue of Liberty and Ellis Island.
- Visit the 9/11 Memorial and Museum.
- Visit the High Line, an elevated park built on a historic freight rail

Suggest a hotel. I want to see more science and technology. I'm not interested in walking in the park

I recommend the Pod 51 Hotel. It is a medium-priced hotel located in Midtown Manhattan, which is an upmarket location in New York City. It's in close proximity to the following technology and science-related attractions:

- The Museum of Modern Art (MoMA) which frequently exhibits works related to technology and design
- The Intrepid Sea, Air & Space Museum which features the USS Intrepid, a retired aircraft carrier, and the Space Shuttle Enterprise.
- The American Museum of Natural History, which has a Rose Center for Earth and Space which

Remember that ChatGPT only collects data through 2021. As a result, it is out of date and the data might not be totally accurate.

You can start with the output and then add the most recent logistical and price information. The outcomes are excellent and nearly ready for usage. This is an excellent method for using ChatGPT to get income from organizing trip plans.

Read our article to learn more about the upcoming GPT-4 release and how AI developments may benefit your company.

Last but not least, although though utilizing it is currently free, it will soon be monetized and expensive to use; after all, it cost billions to develop. The Wall Street Journal reports that Microsoft Corp., a startup investor in OpenAI, plans to incorporate ChatGPT and other AI features into its products and make them available as platforms for other businesses to build on.
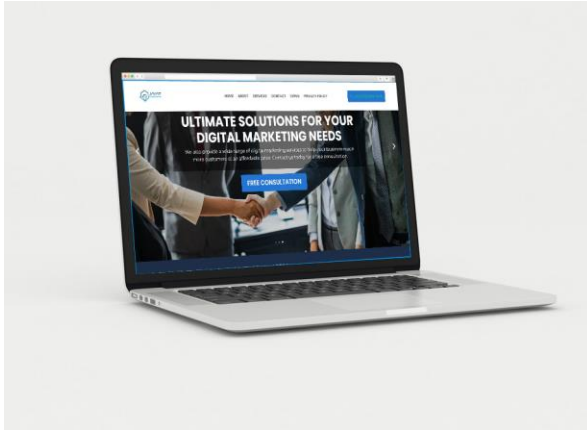

Thus, while the iron is still very hot, strike now!

The End
